‘StoneCaster’

Acromix StoneCaster installation featuring low profile silo, 4 each Acromix aggregate storage bins and three 1/2 yard, Acromix ribbon style mixers. The plant is fully automated. Top photo illustrates the “L” configuration of the batch plant with overhead delivery trolley positioned over a mixer. Bins are charged by front end loader

The plant is fully enclosed indoors and removed from the elements. The geometry is compact and efficiently utilizes the plant production area.

The StoneCaster is capable of storing multiple colors or grades of aggregates

The hydraulic lifting operation saves valuable production floor space and lifts the pre-measured material safely and cleanly to the material delivery system. The StoneCaster does not employ messy and maintenance intense conveyors
