“**ERM** Certified Value”

Hydraulic beam lifting and Hydraulic Pinning allow you to quickly and easily change from one pipe size to the next.

Cam followers accurately guide the moveable beams as you adjust the **Pipe Certa-Fire** for the next test.

The **Pipe Certa-Fire** requires just two large hydraulic cylinders.

Bell-end pipe present a special challenge. We've made it easy with adjustable top and bottom beams. You can shift the beams to the correct positions to insure the specified loading is achieved.
