Box / Pipe Tipper

The single station tipper is made to tip box culverts or large diameter pipe without damaging the joint area which reduces the need for repair due to handling.

Box / Pipe Tipper

Features Include:

Rugged Construction – Will provide years of reliable service.

Hydraulic Cylinders - Heavy Duty Hydraulic Cylinders provide the tipping force required while keeping the product “under control” during the tipping cycle.

Full 90 Degree tipping – Allows for the product to be easily picked from the end after the tipping process is complete.

Portable – The unit can be easily shipped without disassembly.

Quiet Operation – A single hydraulic pump provides all the power required.

Low Maintenance – With manual valves in the hydraulics, and easily accessible bearings, maintenance is minimal.
